## Powerful Sliding Gate Motor for Gates Up to 2000 kg.

### Electromechanical Operator for Heavy Sliding Gates

The **ONDA 2000** is a gear motor which has been developed to move commercial or residential gates of large dimensions and weight. Its practicality, sturdiness, reliability

and the fact that it has been studied for intensive use, makes it stand out from the other motors.

The practical, sturdy, oil bathed and reliable electromechanical gear motor has a control unit on board that foresees an electric brake.

The motor of the **ONDA 2000**, which has an irreversible oil bathed

step-down gear that is noiseless and functional at temperatures that range between -20°C and + 70°C, does not need the application of an additional electric lock.

The anti-crush system is totally safe for it is guaranteed by an adjustable clutch that on contact with an obstacle, reduces the thrust force to the motor.

### MODELS

The **ONDA 2000** is supplied with a control unit on board.

Accessories: Foundation Plate

All other accessories are standard to the Aprimatic range.

## TECHNICAL SUGGESTIONS

The **ONDA 2000** motors, which have a built in clutch, guarantee an extremely high level of safety compared to other similar systems. However, the security can only be effective if the mechanisms of the gate are according to the criteria outlined in the CE regulations, UNJ 8612, which are: easy to slide (the diameter of the wheels should be adequate enough to handle the weight) and the mechanical limit stops on the gate guides so as to prevent the gate from coining off the rails or falling over.

Read the installation before setting the system at work and proceed according to the methodology indicated on the same.
